

QUICK GUIDE TO iPHONE'S IOS SETTINGS

Understanding the iPhone's settings can feel overwhelming at first. There are a lot of options and a lot of user control, so where do you begin? CRF recommends going through your whole phone's settings to clearly understand the device, but we have highlighted where you should consider first:

UNDER GENERAL

AIRDROP: Airdrop lets you share photos, videos and documents instantly with people nearby. It can be a great way to send content to other Apple users instantly, but if left open users could be faced with receiving unsolicited photos or videos

UNDER PHONE

CALLER ID: Allows people to see the number you are calling from

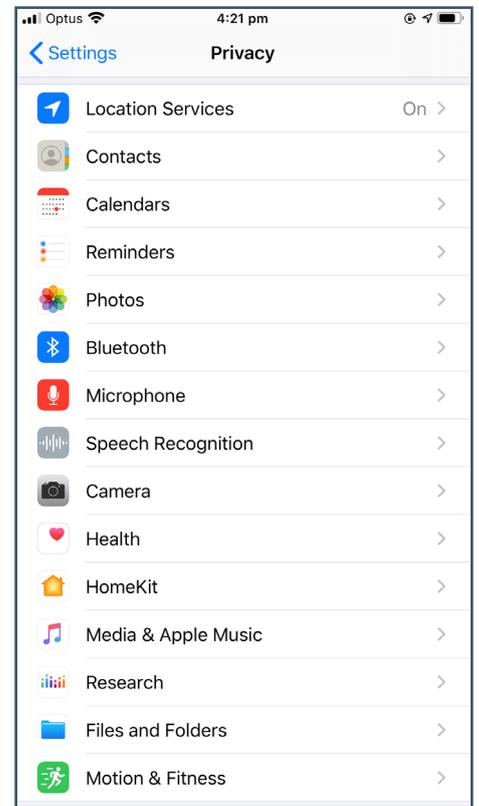

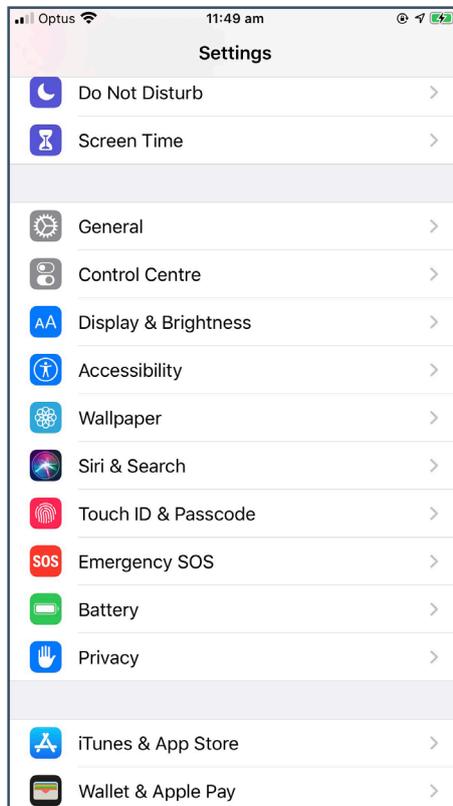

UNDER PRIVACY

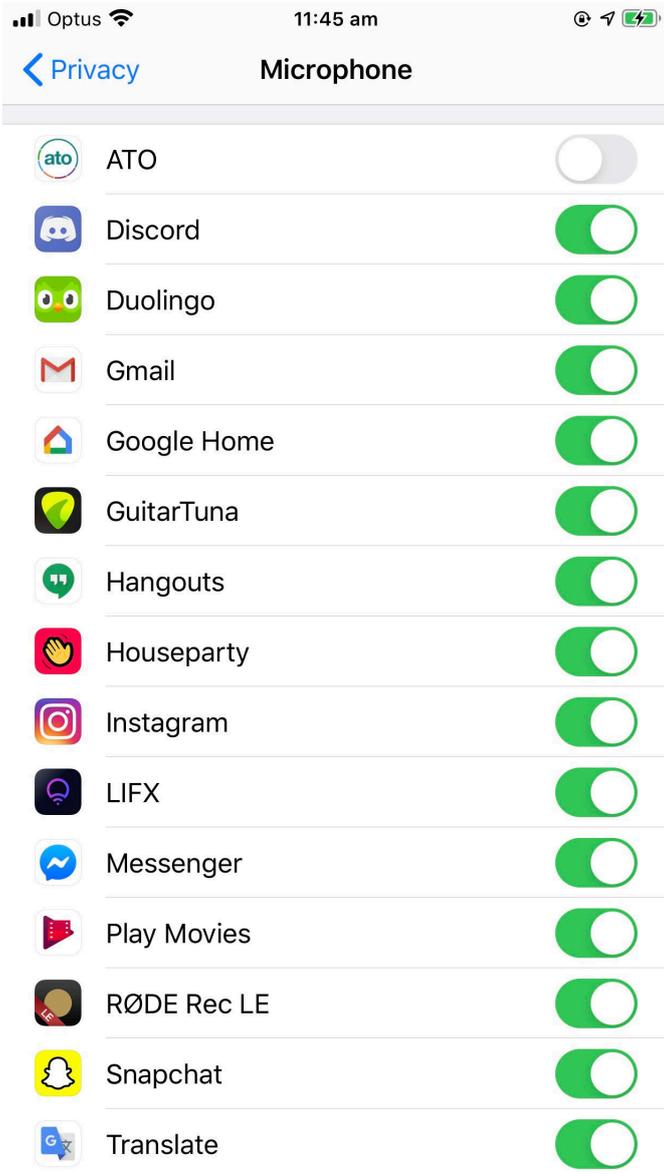

PHOTOS: Photos stored on your iPhone may contain other information, such as where and when the photo was taken

MICROPHONE: Choose which applications have access to your microphone

CAMERA: Choose which applications have access to your camera

LOCATION SERVICES: Location Services uses GPS, Bluetooth and crowd-sourced Wi-Fi hotspot and mobile tower locations to determine your approximate location. Choose which apps have access to this information

Managing Camera Permissions

Step 1:

Tap 'Settings' on the home screen

Step 2:

Scroll down and tap 'Privacy' > tap 'Camera'

Step 3:

Tap to slide the permissions on/off

Managing Microphone Permissions

Step 1:

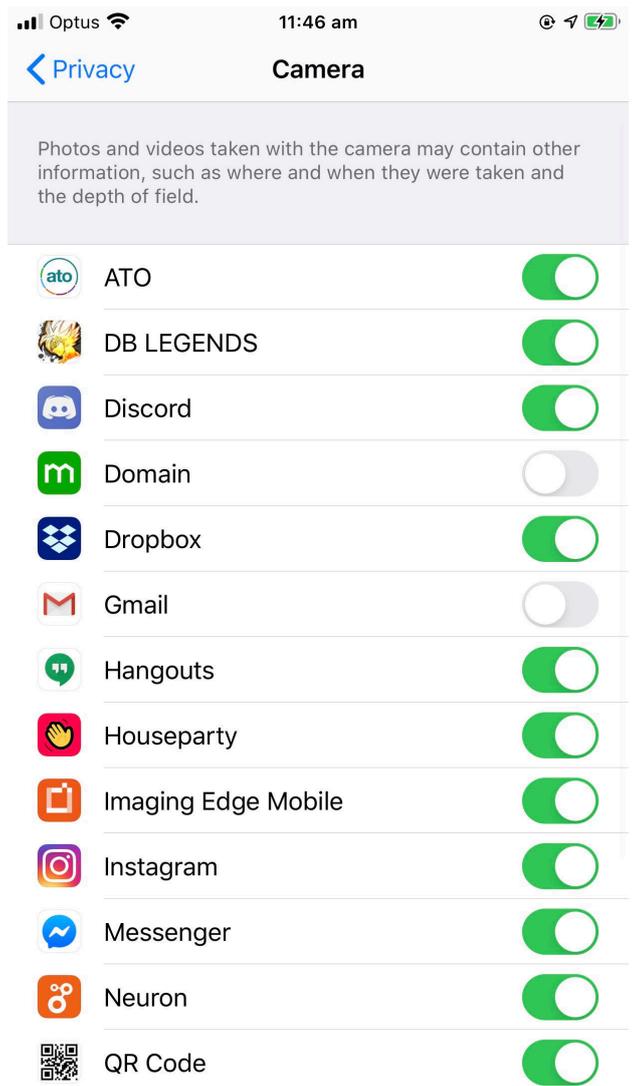

Tap 'Settings' on the home screen

Step 2:

Scroll down and tap 'Privacy' > tap 'Microphone'

Step 3:

Tap to slide the permissions on/off

Managing Airdrop Permissions

Step 1:

Tap 'Settings' on the home screen

Step 2:

Scroll down and tap 'General'

Step 3:

Tap 'Airdrop' and adjust to your preferred setting

RECEIVING OFF: Airdrop has been turned off, other users will not be able to see, or send files to your device.

CONTACTS ONLY: Only contacts saved to your device will be able to send you files.

EVERYONE: Your device is available publicly and anybody can request to send your device files. CRF does not recommend this option.

Managing Caller ID

Step 1:

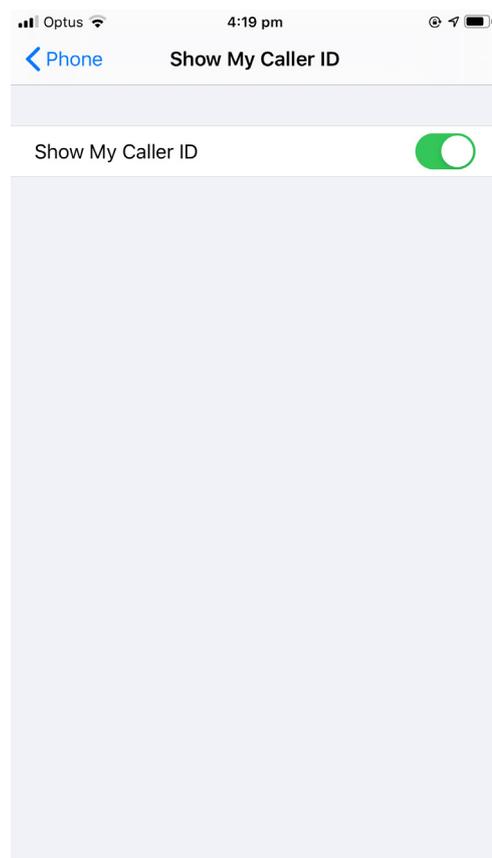

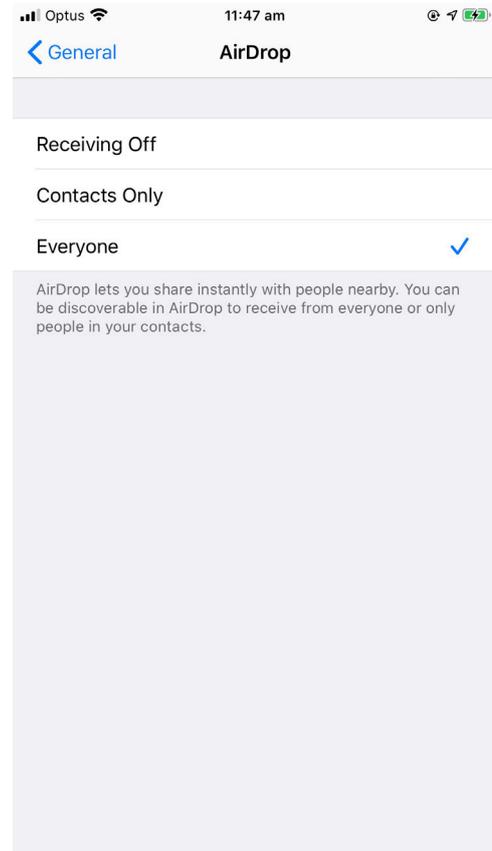

Tap 'Settings' on the home screen

Step 2:

Scroll down and tap 'Phone'

Step 3:

Tap 'Show My Caller ID' and adjust to your preferred state

Managing Location Services

Location services uses GPS, Bluetooth and crowd-sourced Wi-Fi hotspot and mobile tower locations to determine your approximate location. Within its settings you can choose whether to turn off location services altogether, or choose specific apps that have permission to your location.

Step 1:

Tap 'Settings' on homescreen

Step 2:

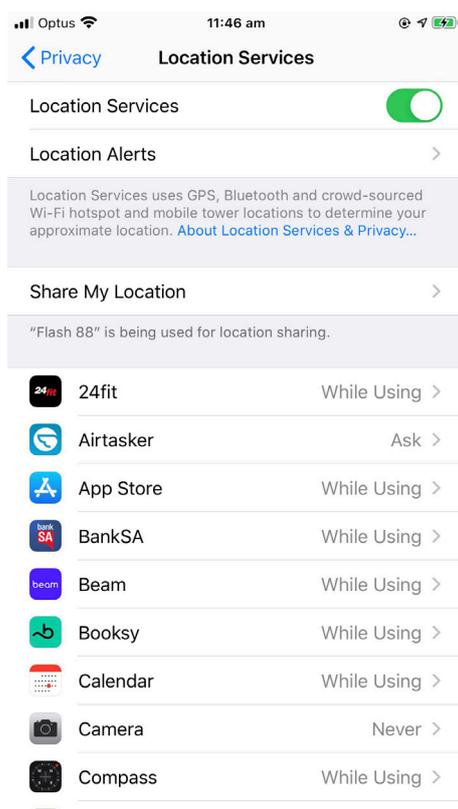

Scroll down and tap 'Privacy'

Step 3:

Tap 'Location Services'

Step 4:

Tap slider on 'Location Services' to turn on/off

Managing Geotagging

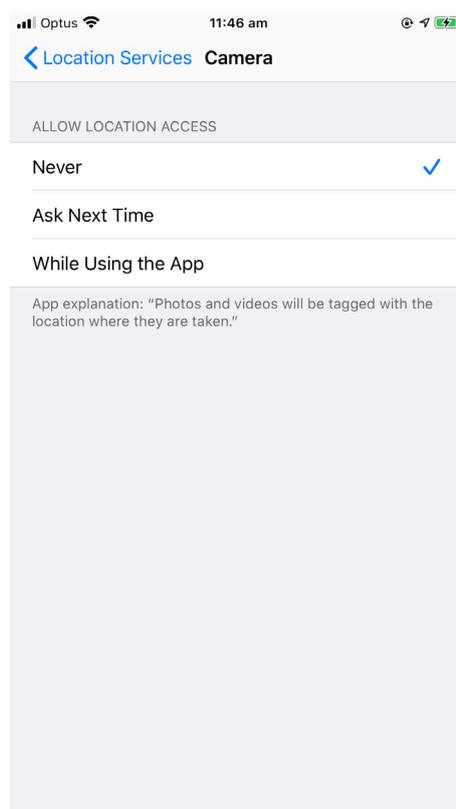

Geotagging is most commonly used for photographs and stores specific information about where the picture was taken. To alter what apps imprint this information, follow the same steps to find location services. Instead of tapping the slider off altogether, you can click an app and manage it independently.

NEVER: Prevents access to Location Services information

ASK NEXT TIME: This will give you the three options to choose for next time you are on the application.

WHILE USING: Only allows app to access location while app is running.

ALWAYS: Allows access to your location even when app is in the background.

Managing Photos

Photos stored on your iPhone may contain other information, such as where/when the photo was taken. You can locate it by following the steps:

Step 1:

Tap 'Settings' on homescreen

Step 2:

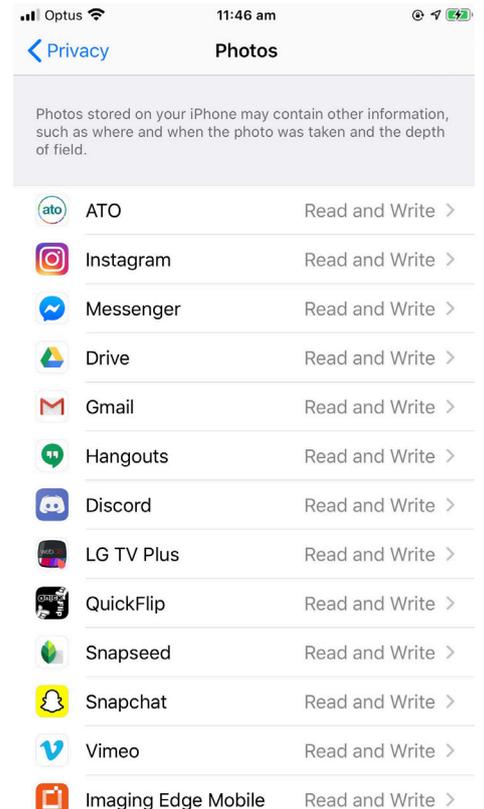

Tap 'Privacy'

Step 3:

Tap 'Photos'

Step 4:

Select app you would like to edit permissions on and tap 'Never'

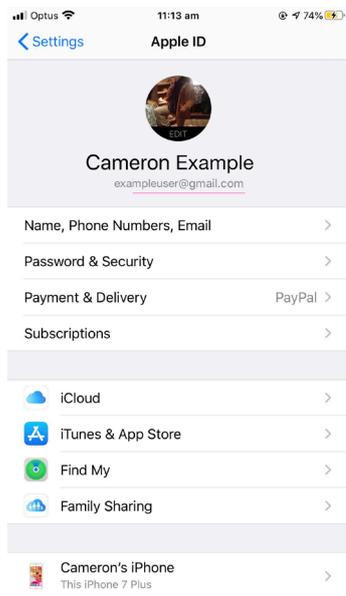

QUICK GUIDE TO iPHONE'S FAMILY SHARING

Family Sharing makes it easy for up to six family members to share iTunes, Apple Books, App Store purchases, an Apple music subscription, and an iCloud storage plan. Your family can also share a photo album, calendar, and reminders, and even help locate each others' missing devices.

SETTING UP FAMILY SHARING & ADDING FAMILY MEMBERS:

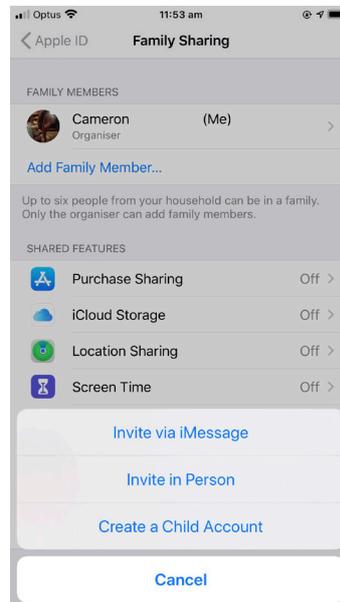

Step 1:

Tap your name at the top of 'Settings'

Step 2:

Tap 'Family Sharing' and 'Add Family Member'

Step 3:

Tap 'Create a Child Account'

Create Apple ID for a child

This will automatically add this child's account to your family until the child is at least 13 years old. Use Ask to Buy to require approval for iTunes, Apple Books or App Store purchases.

To get started, you need to provide parental consent and verify your payment information.

Step 4:

Follow the prompts

UNDERSTANDING FAMILY SCREEN TIME:

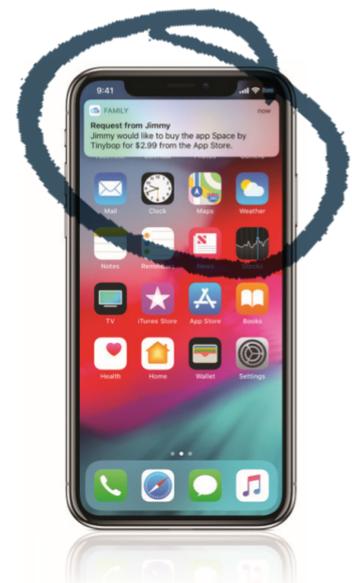

Once Family Sharing has been set up and each child has been added, you can also connect it with Screen Time. Family Screen Time grants parents the ability to create app limits, schedule time limits and offers the 'permissions' feature. This allows your children to make requests from their phone and the organiser answers from theirs. To find Family Screen Time, follow the steps:

Step 1:

Tap on 'Settings'

Step 2:

Tap on 'Screen Time' & tap on name of child whose account you would like to edit.

QUICK GUIDE TO iPHONE'S SCREEN TIME

Screen Time allows you to access real-time reports about how much time you spend on your iPhone and iPad, and set limits for what you want to manage.

NOTE: You can manage your child's Screen Time manually from your phone too, but you must set up Family Sharing prior to access these features. Once completed, you can find their screen time options by following the steps:

Step 1:

Tap 'Settings' on the homescreen

Step 2:

Scroll down and tap 'Screen Time'

DOWNTIME:

Think of this as a nap for your screen time. Set a schedule for time away from the screen. During Downtime, only phone calls and apps that you choose to allow will be available.

APP LIMITS:

Set daily limits for your apps. For example you might only want to see Productivity Apps while you are at work.

COMMUNICATION LIMITS:

Communication limits apply to Phone, FaceTime, Messages and iCloud contacts. You can set contacts for down time (i.e. parents only).

ALWAYS ALLOWED:

You might want to access certain apps, even if they are set to Downtime. Always Allowed assists with this customisation.

CONTENT & PRIVACY RESTRICTIONS:

You can decide the type of content that appears on your device. You can also block inappropriate content, purchases, downloads and set your privacy settings.
